

ABSTRACT OF THE DISCLOSURE

A female housing (20) connectable with a male housing (10) to be mounted on a panel (P) is provided with a terminal-accommodating portion (21) for accommodating terminal fittings (29). A jaw (22) bulges out from the outer surface of the terminal-accommodating portion (21) over the entire circumference to face the panel (P) substantially in parallel. A grommet (23) is attached to the jaw (22) and is held in close contact with the panel (P) by being present between the panel (P) and the jaw (22). A protrusion (40) is provided on the jaw (22) to surround the terminal-accommodating portion (21).
